Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Benjamin et al 014' in view of Goto et al 969'. Benjamin et al teach the claimed subject matter except for showing use of a controllable insulator between the heating and cooling elements. The patent to Goto et al is applied for teaching use of controllable insulator layer including a Peltier device to regulate the heat flow to the substrate in dependence on sensed control parameters and use of the same leads to enhanced temperature control of the substrate and hence enhanced quality of processing. In view of this teaching it would have been obvious to modify the Benjamin et al system with a controllable insulation layer in lieu of the disclosed static insulator layer, to enhance the quality of the process. Note with respect to the dependent claims, the patent to Benjamin et al does control multiple zones of the processor, as claimed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Jones, Gaasch et al and Furuya et al are cited for disclosing .ms of interest to the disclosed invention.
